

submitted herewith on a separate page. The changes made are shown explicitly in the attached "Version With Markings To Show Changes Made".

Please cancel the original first paragraph on page 1 and substitute therefor the rewritten first paragraph on page 1, as follows:

1
B The invention concerns a child-safe packing for tablets, capsules and similar pharmaceutical products with a blister pack with at least one cup to hold the tablets or capsules sealed by means of a push-through cover film, in which packing the blister pack is arranged between a base part and a cover part of an outer pack, the cover film of the blister pack facing towards the base part, the base part having a removal opening and the cup of the blister pack is movable and guided in an opening slot in the cover part and can be brought over the removal opening in the base part to push through the cover film and remove the tablets.

Please insert the new paragraph on page 1, line 24 (i.e., between lines 23 and 25), as follows:

B² U.S. Patent No. 5,150,793 discloses child-safe packing for tablets, capsules and similar pharmaceutical products with a blister pack with at least one cup to hold the tablets sealed by means of a push-through cover film, in which packing the blister pack is arranged between a base part and a cover part of an outer pack, the cover film of the blister pack facing towards the base part, the base part having a removal opening and the cup of the blister pack is movable and guided in an opening slot in the cover part and can be brought over the

β^2 removal opening in the base part to push through the cover film and remove the tablets.

Please cancel the original sixth paragraph on page 1 and insert therefor the rewritten sixth paragraph on page 1, as follows:

β^3 The invention is based on the task of creating a child-safe packing of the type described initially which can easily be opened by the elderly. Essentially, the packing is structured such that its opening requires a combination skill, or simultaneous or complex movements must be performed.

Please cancel the original seventh paragraph on page 1 and insert therefor the rewritten seventh paragraph on page 1, as follows:

β^4 The task according to the invention is solved by child-safe packing for tablets, capsules and similar pharmaceutical products with a blister pack with at least one cup to hold the tablets sealed by means of a push-through cover film, in which packing the blister pack is arranged between a base part and a cover part of an outer pack, the cover film of the blister pack facing towards the base part, the base part having a removal opening and the cup of the blister pack is movable and guided in an opening slot in the cover part and can be brought over the removal opening in the base part to push through the cover film and remove the tablets, the opening slot has a width (t) which is less than the diameter (s) of a shoulder of the cup but greater than the diameter (u) of the cup, and in that a tear-off strip which at least partly covers the opening slot and is separable by way of a weakening line is connected to the cover part.

Please cancel the original first full paragraph on page 2 and insert therefor the rewritten first full paragraph has been substituted therefor on page 1, as follows:

β^s Preferably the tear-off strip at least partly covering the opening slot is connected with the cover part by way of a perforation line.

Please amend the application to insert the abstract of the disclosure that is submitted herewith on the attached sheet.
